

# U.S. Open-End, Closed-End, and Variable Annuity Fund Classification Descriptions

## Fund Classification FAQs

- Do funds with a **portfolio-based** classification also have a **prospectus-based** classification?
- Yes. **All funds have a prospectus-based classification.** Only those funds that are considered “diversified,” meaning they invest across economic sectors and/or countries, will also have a portfolio-based classification. For instance, any fund classification that appears under **World Equity Fund Classification Definitions—Global** is also a Global Fund under the **World Equity Funds** definition. See chart below:

- Does the chart above contain all of the portfolio-based classifications?
- For open-end funds, yes. The differences arise when examining variable annuity and closed-end groups. Lacking the depth of the open-end market, these universes have been winnowed to maintain adequate peer groups. The varieties are fewer but the classification process is similar. See charts below:

- For funds that are in the USDE model, is 25% the threshold before the funds would be moved to the WEC model?
- Yes. 25% is where we make the domestic/global decision. If a semiannual portfolio exceeded this it would likely prompt an investigation. What we would want to know is whether an overseas allocation  $\geq 25\%$  reflects an on-going strategy or temporary, opportunistic trades. The greater the foreign allocation and/or the longer it's duration above the threshold the more likely we are to consider the portfolio to be global in nature.
- Are ADRs counted as "foreign" or only securities that were bought in foreign currency?
- ADRs are considered foreign.
- Are securities in foreign currency still dropped out of the USDE model?
- Securities in foreign currency are no longer dropped from the model. We convert their market caps into USD.
- What are the differences between classifications and objectives in Lipper's U.S. scheme?
- Originally Lipper grouped all funds by their prospectus based objective. The introduction of Lipper's holdings based model and demand for more granular groupings paved the way for the creation of a classification scheme. This scheme was designed to work in tandem with Lipper's legacy objectives and in many cases a fund's objective and classification are the same.
